HSE MILESTONE

SAFETY MILESTONES ACHIEVED AT ROC'S OPERATED AND NON-OPERATED ASSETS

ROC has achieved a milestone of 1.5 million man hours, or two and a half years worked, at our operated assets without an injury worse than first aid.

In addition, ROC has not had any Tier 1 or Tier 2 process safety events* since we started recording these metrics in 2013.

ROC's HSE and facilities integrity performance is driven by an Expectation-based HSE management system, that allows fit for purpose controls to be developed according to the risks faced by each operation.

ROC also encourages our partners in our non-operated assets to strive for HSE excellence. It is more than two years, or 3 million man hours, since the last injury worse than first aid at our non-operated assets.

* as defined in API RP 754
